Education

University of Southern California <i>Master of Science in Computer Science; GPA: 3.7/4.0</i>	Los Angeles, CA Aug. 2025 – May 2027
University of Mumbai <i>Bachelor of Engineering in Computer Engineering; GPA: 8.96/10</i>	Mumbai, India Jun. 2020 – May 2024

Experience

Software Engineering Intern <i>Statewide California Earthquake Center (SCEC)</i>	Oct. 2025 – Present Los Angeles, CA
- Migrating legacy PHP 5 services to PHP 8 for a public platform serving ~56M users, preserving API compatibility and enabling zero-downtime upgrades. - Hardening high-traffic backend paths during modernization with backward-compatible changes and regression-safe release practices.	
Associate Software Development Engineer <i>CarWale (CarTradeTech)</i>	Sep. 2024 – Oct. 2025 Mumbai, India
- Restructured Memcached strategy in a .NET 6/8 microservice from 6.15M version-city keys to 4,000 version-level hashmaps, cutting DB calls by 93% and reducing shared MySQL cluster load by ~28%. - Implemented DTO-level Memcached caching for home/model APIs (city-unset + top 10 cities ≈ 90% traffic), reducing downstream calls by 22% and improving p90 latency from 84ms to 58ms across 80M monthly devices. - Removed a sequential API-gateway dependency via an in-memory masking-name dictionary with RabbitMQ-driven refresh, improving TTFB by ~23% (112ms → 86ms) and cutting MMV service calls by ~30%. - Extracted used-car inventory from a legacy monolith into a standalone .NET microservice using backfill, dual-writes, and reconciliation to reach data parity before cutover. - Cut monorepo CI build times by ~50% (25–30 → 12–15 min) by migrating Lerna to PNPM workspaces and adding Docker BuildKit/NuGet cache mounts, saving ~5.5 engineering hours/day across 90+ developers. - Optimized SQL/data-access paths on dealer-platform services (60s → 0.5s fetch time) and contributed to Linux-hosted .NET Core migration saving ~\$20K/year; 1st Place at CarWale Hacktivate 6.0.	
Software Engineering Intern <i>Itech Digital Forensics Pvt Ltd</i>	Feb. 2023 – Oct. 2023 Mumbai, India
Built workstation authentication software and an Android validation app for signal-isolation compliance, contributing to a 15% shielding-efficiency improvement.	

Projects

Mozoop <i>Python, NLP, Computer Vision, Multimodal Pipelines</i>	1st Place, Mumbai Hacks 2024
Built an end-to-end generative pipeline that analyzes full-length films to auto-produce trailers via scene ranking, subtitle sync, and audio generation.	
inHomeGen <i>Python, Stable Diffusion, DreamBooth, YOLO, REST APIs</i>	
Built an API-backed Generative AI platform for text/voice-driven interior redesign with object-level editing and budget-aware furniture recommendations.	

Technical Skills

Languages: C#, SQL, Python, JavaScript
Backend: .NET 6/8, ASP.NET, REST APIs, Microservices, RabbitMQ, Memcached, MySQL
Infrastructure: AWS (EC2, S3, CloudFront), Docker, Jenkins, CI/CD, Linux
Supporting: React, PyTorch, TensorFlow, Computer Vision
